Summary

AI engineer with an MSc in Data Analytics and 3 years' software engineering experience building production APIs and SQL systems for a government client. I build generative AI applications: RAG pipelines, LLM agents with LangChain, LangGraph and MCP, and tested LLM services with validated, structured output, backed by strong Python, SQL and data analysis skills.

Education

Dublin Business School **2025 – 2026**
MSc in Data Analytics *Dublin, Ireland*

SASTRA University **2018 – 2022**
B.Tech in Information Technology *Tamil Nadu, India*

Experience

Psiog Digital **Aug 2022 – Jan 2025**
Software Engineer — Proceed: Infrastructure (Government of Israel) *Chennai, India*

- Built RESTful .NET MVC APIs that the Government of Israel uses to register and process applications from construction and energy companies.
- Optimised T-SQL stored procedures, triggers and views (recursive CTEs, cursors), greatly improving performance.
- Maintained and extended the client website for 1.5 years with JavaScript and ExtJS customisations.
- Integrated third-party REST APIs and a Google Forms integration with Creatio CRM.

Psiog Digital **Feb 2022 – Sep 2022**
Full Stack Engineer Trainee *Chennai, India*

- Completed a six-month full stack development programme; built a movie recommendation app with C#, ASP.NET, Angular, SQL and Entity Framework.

Projects

RAG Pipeline over Technical Documents | *Python, LangChain, Sentence Transformers, ChromaDB, OpenAI*

- Built an end-to-end RAG pipeline: PDF loading, chunking (92 pages into 221 chunks), all-MiniLM-L6-v2 embeddings and ChromaDB storage.
- Implemented threshold-based retrieval, with answers that return their context, sources and a confidence score.

Customer Feedback Analyzer (Generative AI) | *FastAPI, OpenAI GPT-4.1, Gemini, Pydantic, Streamlit, SQLite*

- REST service turning reviews into a validated sentiment, 1–5 score and theme using LLM structured output.
- Streamlit dashboard, SQLite history and fault-tolerant batching, covered by 13 automated tests with the LLM mocked.

LLM Agents with LangChain, LangGraph & MCP | *LangChain v1, LangGraph, MCP, OpenAI, Gemini, Groq*

- Built ReAct agents with tool calling, web search, checkpointed memory, streaming and human-in-the-loop approval.
- Connected one agent to two MCP tool servers at once (stdio and streamable HTTP) using MultiServerMCPClient.

AI-Generated Face Detection with Vision Transformers & Explainable AI | *MSc research · Python, TensorFlow*

- Trained a Vision Transformer to detect AI-generated faces, with explainable AI to audit each prediction.

Earlier projects: Review Sentiment Analysis (NLP), Movie Recommendation App, Social Distance Detection in Video (computer vision), House Price Prediction App (scikit-learn, Streamlit, pytest).

Technical Skills

Generative AI & Agents: LangChain, LangGraph, MCP, RAG, tool calling, agent memory, human-in-the-loop, prompt engineering, Pydantic structured output, OpenAI, Gemini, Groq

Retrieval & LLM Engineering: Sentence Transformers, ChromaDB, FAISS, semantic search, FastAPI, REST APIs, pytest, uv, Git, GitHub Actions

Machine Learning: TensorFlow, scikit-learn, Vision Transformers, Explainable AI, NLP, sentiment analysis, computer vision

Data & Analytics: Python (pandas, NumPy), SQL (T-SQL, PostgreSQL, MySQL), SSIS (ETL), Tableau, Streamlit

Software Engineering: C#, .NET MVC, JavaScript, ExtJS, Entity Framework

Achievements

Conference Paper — *Proactive Task Failure in Scientific Workflow using Set Combination in Cloud Environment*

- Co-authored and presented a paper applying ensemble techniques to predict cloud task failures before they occur.
